- Suitable for diesel engines with in-line or distributor pumps from Bosch (except for type VP44), Diesel-Kiki, Nippon-Denso or Zexel. The conversion of diesel engines with Bosch VP44-injection pump, high-pressure fuel injection like unit-injector pumps or common-rail-technology is only possible through skilled HeiPro conversion partners. Injection pumps from Delphi, Lucas, CAV, Stanadyne and Roto-Diesel are not or only partially suitable.
- Following components are included in delivery: controller (mode auto or manual switching), compact "all in one" VegBlock (tank switching, flush/vent) incl. dust and waterproof protective cover with integrated electric continuous-flow heater (Diesel-Therm®), thermo switch (regulates the temperature), control electronics (diesel quick purge, acoustic warning), heat exchanger for water circuit, fuel lines, fuel filter, relays, pre-assembled cable loom with connectors, fuses and protective caps, miscellaneous materials, detailed installation instructions
- A additional fuel tank is not included in delivery and has to be ordered separately.
- The installation can be performed by any reputable garage/mechanic. Craftsmanship and an understanding of diesel engines provided, a DIY (do-it-yourself) installation with the included installation notes is also possible.
